Summary

Software engineer with over a decade of experience shipping quality features and building high-performance teams. Works across the stack in Elm and Scala, and specializes in functional programming: leading rewrites, setting standards, and bringing React engineers along for the ride. Builds and open sources developer tooling for the Elm and ReScript ecosystems.

Experience

Avetta

Software Engineer II

01/2025 - Present

Full-stack product engineer on Avetta's supplier compliance platform, shipping features across a large production Elm frontend and Scala (http4s/Tapir and Play/MongoDB) backend services.

- Shipped creator filtering end to end for the Worksite Safety product: refined the epic into per-service tickets, then implemented all of them solo — Elm filter pickers across four list and calendar views, a Scala 3 http4s/Tapir aggregation service, and the Play/MongoDB persistence layer behind it
- Worked on the formula builder in the forms configuration tool, which lets configuration engineers author, save, and live-test scoring calculations without engineering involvement
- Delivered review-chain management for client admins: site-specific settings pages, clear-all and revert-to-default flows, and safe-deletion UX with server-driven delete permissions and 409 conflict handling
- Raised the team's code review bar with 400+ review comments across 180+ PRs, and distilled the org's ~3,400-comment PR review history into living Elm and Scala style guides the team reviews against
- Built internal dev tooling, including a runtime Elm view inspector that maps any rendered DOM element back to its source function and line, with a component-tree overlay and lazy-render diagnostics

CareRev

Senior Frontend Engineer

08/2021 - 06/2023

Rewrote CareRev's React-based Facility app as a modern Elm application, on a platform that helps hospitals staff qualified nurses and gives nurses control of their careers.

- Re-architected the start of CareRev's React to Elm rewrite
- Shipped high-impact features and services like Smart Rates to high-profile clients, saving them time and money
- Mentored junior engineers and trained senior engineers on pure functional concepts
- Onboarded engineers of every skill level into an Elm codebase, and set the code practices and standards for Elm development
- Built codegen tooling to automate tedious work like Amplitude tracking and tracking-plan updates
- Implemented a design system in TailwindCSS with designers, and set up Storybook to visualize it alongside reusable UI
- Conducted hiring interviews and authored the code challenges used to vet candidates

Triller

Senior Frontend Developer

09/2020 - 08/2021

Rebuilt Halogen and integrated it into Triller's platform after the acquisition, adding live streaming and a web app to their suite of tools.

- Built the scheduled-stream and livestreaming tools used by artists like Jennifer Lopez and DJ Khaled to entertain thousands of fans
- Powered the Verzuz battle series, including realtime audience voting during broadcasts
- Picked up a lasting habit of reverse engineering web apps to see how they work

Omicron Media, Inc

Frontend Developer

11/2017 - 09/2020

Built Halogen, a live streaming platform for artists and creatives, using Elm, JavaScript, and Web Components.

- Grew Halogen past 120k lines of Elm; the platform was acquired by Triller
- Helped with the upgrade from Elm 0.18 to 0.19 and the migration from BEM-style CSS to TailwindCSS
- Onboarded and trained React engineers in Elm and functional programming
- Shipped tipping, gifting, chat, and live and prerecorded playback features
- Applied modern responsive design practices to support both mobile and desktop viewers

Web Benefits Design

Frontend Developer

08/2017 - 09/2017

Helped rewrite an aging PHP application using React and Redux with middleware (redux-observable, redux-saga).

Driving fast
Camping
Outdoor Recreation
Travel

UCF Coding Bootcamp

06/2016 - 08/2017

Substitute Instructor && Teaching Assistant

Taught and supported students across HTML5, CSS3, JavaScript, jQuery, Node.js, responsive design, Heroku, Git, user authentication, Laravel, React.js, MySQL, and MongoDB. Graded homework and provided in-class and virtual assistance.

- Gave extracurricular lectures on topics students needed but the curriculum skipped: ES6 features, functional programming techniques, and Git fundamentals
- Discovered a lasting passion for education and mentoring

Startup Media

11/2015 - 07/2017

Frontend Developer

Built frontend applications with designers, DBAs, and stakeholders, including gogreenback.com.

- Built gogreenback's web app in Angular.js, plus the webviews used by its iOS and Android apps

Open Source Projects

Ternpike · <https://ternpike.com>

Elm Tailwind PouchDB Claude API

A local-first trip expense tracker written in Elm. Snap a receipt and Claude fills in the expense, with your data stored on your device first.

Snapkin · <https://snapkin.tools>

ReScript Mobile web CAD

Calipers in, CAD out. Photograph each face of a part, tap two edges, enter your caliper reading, and Snapkin exports the dimensions for Fusion.

Sandlot Derby · <https://github.com/m0n01d/sandlot-derby>

Swift SpriteKit Game physics

A minimalist home run derby for iOS. Swipe through the pitch to swing: the direction sets the angle, the speed sets the power, and the ball flies with real air drag. Prototyped in the browser first, then built on a tested pure-Swift physics core.

resq · <https://github.com/m0n01d/resq>

Rust ReScript CLI AI agents

A command-line tool for reading and editing ReScript code, designed for AI agents first. An agent can pull out one function instead of a whole file, and a bad edit never leaves the file half-changed. Ported from elmq.

rewind · <https://github.com/m0n01d/rewind>

ReScript React Debugger

An Elm-style time-travel debugger for ReScript React apps. Pause a running app, step back through every message and model, see exactly what changed, and export the history as JSON.

elm-peek · <https://github.com/m0n01d/elm-peek>

ReScript React Chrome Extension Elm

A browser extension that adds go-to-definition for Elm code on GitHub, and warns you when a pull request adds a new variant that some case expression will quietly ignore.

elm-view-name-injector · <https://github.com/m0n01d/elm-view-name-injector>

JavaScript Babel Elm

A build step that tags every element on the page with the Elm view function that drew it, so people and AI agents can go straight from the screen to the code.

elm-storybook-verify-examples · <https://github.com/m0n01d/elm-storybook-verify-examples>

Elm Storybook elm-verify-examples

Combines Ryan Haskell-Glatz's Elm Storybook setup with elm-verify-examples, so the examples in your doc comments become Storybook stories automatically. One example works as documentation, a test, and a live component preview.

pr-digest · <https://github.com/m0n01d/pr-digest>

Python GitHub API macOS

A command-line tool and macOS menu bar plugin that shows the pull requests waiting on you, and flags anything new since you last looked.

munbyn-print · <https://github.com/m0n01d/munbyn-print>

Python USB Bluetooth Hardware

Prints to a Munbyn thermal label printer over USB or Bluetooth without the vendor's driver, which doesn't run on Apple Silicon. Speaks the printer's own command language and works around firmware quirks I found by testing on the real hardware.
